

ENNEADIKOSOCHEIA

Colbath 1979

Description: Vesicle polygonal with rounded corners, each corner containing what appears to be a conical indentation extending into the vesicle interior a short distance. Wall thickened around openings to these depressions. Openings may be small and restricted. Vesicle wall thin. Excystment unobserved.

Type species: *E. granulata* Colbath 1979, p. 14, pl. 4, figs 12, 13

Remarks: This genus differs from *Tetraporina* in being polygonal in three dimensions, rather than quadrate.
