Gephyrocapsa dentata HALLDAL & MARKALI, 1955

Fig. 3 — Gephyrocapsa dentata n. sp. ad interim. A coccolith seen from above.

Description:
Electron microscope diagnosis: Only a few single coccoliths of this species have been photographed. The size of these coccoliths is of the same order as that of Gephyrocapsa oceanica coccoliths. The central area and the arch are also very similar. However, the distal rim elements show a distinct difference in the two species.

Type level:
Recent.

Type locality:
Gulf Stream, 38° N, 70° W, November 1953.

Depository:
Institutt for marin biologi, Oslo - Blindern.

Author:
Haldall P. and Markali J., 1955, p. 18, pl. 24, fig. 3.
