

Sollasites BLACK, 1967

Description:

Diagnosis: Elliptical coccoliths consisting of two shields with a large elliptical central opening spanned by one cross-bar along the shorter diameter of the ellipse, and several bars parallel with the longer diameter.

Remarks:

Sollasites is represented by a single species, which does not resemble any other known coccolith.

Type species:

Sollasites barringtonensis BLACK, 1967.

Author:

Black M., 1967, p. 144.
