

ACRUM

Fombella 1977

ACRUM Fombella 1977, p. 115: "Vesicle spherical or subspherical, with heteromorph processes. The central part of the vesicle is ornamented by a positive hexagonal reticulum of uniform size and mesh. The processes vary from simple, filose or flagelliform, to those which characterize Cymatiogalea and have an interconnecting web of hialine membranes". (Acrum novum: Fombella 1977, p. 116, Pl. 1:9).- text-fig. 3:3.
