

BIOCATENOIDES

Schopf 1968
p 686

Genus *BIOCATENOIDES* Schopf, n. gen.

Type species.—*Biocatenoides sphaerula* Schopf,
n. sp.

Diagnosis.—Slender, chain-like, unbranched filamentous colonies composed of rod-shaped or coccoid cells. Colonies uniseriate, less than 1μ broad, commonly less than 0.5μ broad, up to 100μ long, may be sinuous or recurved, rarely straight.

Etymology.—With reference to filiform colonies (catenoides, řk. = chain-like).
