

DICOMMOPALLA

Loeblich 1970

DICOMMOPALLA Loeblich 1970, p. 39: "Spherical to subspherical body, thin, bilayered wall, outer thinner layer appearing as a "keel" at the margins, inner layer irregularly ridged, without a definite ridge pattern but with a microrugulate pattern superimposed on the larger irregular ridges; excystment is by means of a rounded pylome, bordered with an elevated rim, and double pylomes are common". (*D. macadamii*: Loeblich 1970, pp. 39-40, Pl. 1:1-4; 2:5-8; 3:9-11).- text-fig. 3:63.
