

GALAXIOPSIS

Awramik & Barghoorn 1977

p. 136

Type species: *G. melanocentra* A. & B. 1977

Diagnosis: Irregularly shaped structure 20-30 μm in diameter with two or three radiating arms resembling pseudopodia. Outside surface reticulate. Outer "pseudopodial" layer is thick ($> 5 \mu\text{m}$). Dense internal sphere 15 μm or less in diameter with no wall structure evident. Reproductive structures not recognized.

Incertae sedis
