

KELTMIA

Vorob'eva, Sergeev and Knoll
2009

Genus KELTMIA new genus

Type species.—*Keltmia cornifera* gen. et sp. nov.

Other species.—*Keltmia irregularia* sp. nov.

Diagnosis.—Large vesicle (ca. 500 μm in diameter) with distinctive processes—few in number, with length comparable to the vesicle diameter; broadly conoidal to cylindrical, or club-like, commonly with expanded tips; separated from vesicle interior.

Etymology.—Named with reference to the drilling site of the Kel'tminskaya-1 borehole.
