

Type species: *L. spinosum* U. & T. 1991 p. 73 pl. 15, fig. 147

Diagnosis: The vesicle is spherical, with processes and tubercles on the surface, surrounded by a polygon net of small ridges, a feature typical of the species

Comparison: The species *Cymatiosphaera mopsis* Madler 1963 has a polygonal pattern on the vesicle surface consisting of thick walls or membranes. The polygonal net of the genus *Acrum* Fombella 1977 has a membranous process attached to it
