

LEIOMINUSCULA

Naumova 1961

LEIOMINUSCULA Naumova 1961: "Vesicles round to ellipsoidal of varying size, with a smooth surface and with or without folds". (L. minuta: Naumova 1961, p. 110, Pl. 3:1).- text-fig. 3:126.

Leiominuscula appears to be a group of quite small leiospheres and is not objectively distinguishable from Leiosphaeridia of which it is - in our opinion - a junior synonym.
