

VI. *Saccolyngbya* Zhang, gen. nov.

Type species: *Saccolyngbya qingshanensis* gen. et sp. nov.

Trichome short, unbranched, the same diameter throughout; the fragments of degraded uniseriate trichome surrounded by a wide sheath; sheath oblong-elliptic, gradually attenuated from the middle to the rounded-truncated apices, with a distinct median constriction, dividing the plant into two similar parts; sheath colorless, with fine and slightly constricted transverse striations.

Only one species discovered:

Phylum Cyanophyta
Family Oscillatoriaceae
