

SULCATOSPHAERIDIUM

Umnova 1970

in Umnova & Iakovlev 1970

SULCATOSPHAERIDIUM Umnova 1970, in: Umnova & Iakovlev 1970: "Vesicles elliptical to nearly round; single or double walled in optical section with a surface structure that is smooth, rough, granular, spine-bearing, or reticulate. A longitudinal slit, rent, or depression of varying width is present. No pylomes have been observed".- text-fig. 3:234.

Name not validly published since no holotype has effectively been designated for the type species *S. ovale*
