

2. Actinozygoideae Rood et al. (1971)

Diagnosis: Elliptical coccoliths with an eiffellithalid rim and six or more bars disposed symmetrically with respect to the axes of symmetry of the ellipse. A spine may arise from the point of juncture of the bars in the center of the coccolith. In addition to the type of genus, *Pontilithus* Gartner, 1968, belongs here.
