**Ceratolithina bicornuta**

**Ceratolithina bicornuta** Perch-Nielsen, 1988

Figs. 3, 4 - *Ceratolithina bicornuta* n.sp. x 1800; x-nicols with gypsum plate.

**Description:**

Diagnosis: Species of *Ceratolithina* with two apical spurs and horns.

Description: *C. bicornuta* has two apical spurs of varying length and two horns of varying length and curvature. In some specimens, one horn is short and straight and the other longer and curved, in others both spurs and horns are of about equal length, run parallel and are connected by a bridge. Their ends are tapering or blunt.

Derivation of name: bicornuta, Latin for «with two horns».

**Remarks:**

Between crossed nicols, flat lying specimens appear bright when oriented at 0° to the nicols.

**Type level:**

Middle Albian; NLK 4B, Watznaueria barnesae Subzone.
Occurrence: Beds VI-VIII at Copt Point; Middle Albian NLK 4B Subzone.

**Type locality:**

Copt Point, Folkestone, SE England; Bed VII.

** Depository:**

Copt Point 12.
Holotype: Pl. 1, Fig. 3.
