

110. *Gephyrobiscutum* Wise (1988)

Type species: *Gephyrobiscutum diabolium* Wise, n. sp.

Diagnosis: Elliptical coccoliths with a podorhabdid rim enclosing an open central area bisected by a bar along the minor axis. The bar is composed of two solid elements that extend from the rim to join along a suture near the center.

Remarks: "Gephyro" is from the Greek meaning bridge. The genus is assigned to the Family Biscutaceae Black (1971).
