

192. *Quadrum octobrachium* Varol (1992)

Q. octobrachium

Pl. 2, fig. 7

Q. octobrachium

10 μ m

Pl. 7, fig. 5

Diagnosis: A species of *Quadrum* having eight ray-like elements in each cycle of the wall.

Derivation of name: From Greek *octo*, eight and *brachium*, arm referring to eight ray-like elements in its wall.

Holotype: Pl. 7, Fig. 5.

Type level and locality: Basal Turonian, offshore Angola.

Dimensions of holotype: Maximum diameter: 3.3 μ m.

Occurrence: *Q. octobrachium* is present from intra-upper Cenomanian to basal Turonian sediments worldwide.
