

201. *Rhomboaster Bramlette & Sullivan (1961) emend. Wei & Zhong (1996)*

Type species: *Rhomboaster cuspis* Bramlette and Sullivan.

Remarks: Bramlette and Sullivan (1961) introduced this genus for nannoliths consisting of a single crystal unit in the form of a rhombohedron with depressed faces. The genus is emended here to include cubic forms (see Figures 4.1, 4.2, 4.13, 5.1b-5.3b and 5.12; Perch-Nielsen, 1985, p. 527, fig. 90.11; Bybell and Self-Trail, 1995, pl. 23, figs. 2a-2d).
